BEAM Summer Programs are for minorities, young women, and students interested in exploring careers in engineering and other technical fields. These enrichment programs are designed for academically qualified students who want to discover the wonder and excitement of science, technology, engineering, and math in a hands-on environment.

Programs are for students completing 7th – 11th grades, and there are only 20 spaces available for each program. Girls are encouraged to apply for both the Girls Camp and the Summer Program of the appropriate grade level. Programs run Monday thru Friday and include field trips and career speakers. Friday times are subject to change, as these will be field trip days.
