NEW COURSE DEVELOPMENT

OSU CHE 4753/CHE 5753 Applied Numerical Computing for Scientists & Engineers (CHE 4990/5990 in 2016, 2017)
Course Description: Practical software tools for computational problem solving in science and engineering: version control (e.g., Git), mathematical typesetting (LaTeX), graphical user interfaces, and high level programming languages with libraries of solvers and visualization tools (e.g., Python and MATLAB). Application of numerical computing methods to solve systems of differential and algebraic equations and to estimate model parameters using optimization. Guest lectures from science & engineering faculty conducting computational research supplement the course.

Short course/workshop: Numerical Problem Solving across the Curriculum with Python and MATLAB Using Interactive Coding Templates, delivered at ASEE/AIChE Chemical Engineering Summer School 2022
Co-developers: Robert Hesketh, Austin Johns, Matthew Stuber
Course Description: This workshop explores Python and MATLAB templates and interactive coding notebooks for use throughout chemical engineering core courses and computational thinking as a problem solving approach. Students do not need prior Python or MATLAB programming to use these templates.
